

## Enfamil ProSobee® Powder Infant Formula

Yields about 1 Quart

**NOTE: Powdered products are not commercially sterile and should not be used for immunocompromised patients, unless clinically required, and then under strict medical supervision of preparation and use.**

| <b>Calories Desired</b><br>Cal/fl oz | <b>Amount of Powder, grams</b><br>Approximate Household Measures* | <b>Amount of Water</b><br>Fluid Ounces |
|--------------------------------------|---|--|
| 20                                   | 126 g (1 ¼ cups)  | 28.5                                   |
| 22                                   | 138 g (1 1/3 cups +2 tsp)   | 28.5                                   |
| 24                                   | 151 g (1 ½ cups)  | 28                                     |
| 26                                   | 164 g (1-1/2 cups+2 Tbsp)   | 27.5                                   |
| 27                                   | 170 g (1 2/3 cups+1 tsp)  | 27.5                                   |
| 28                                   | 176 g (1-3/4 cups)  | 27.5                                   |
| 30                                   | 189 g (1-3/4 cups + 2 Tbsp)                                       | 27                                     |

\*Household measures of Enfamil ProSobee® should be unpacked, level standard measures.

Weighing powder product provides the most accurate final preparation. Approximate household measurements are provided as a convenience when a precise dilution is not required.

Each cup of powder provides approximately 510 Calories.

One-half fluid ounce of water can be measured using one tablespoon (1 Tbsp water=1/2 fl oz water).
