

Enfamil® NeuroPro™ EnfaCare® Powder Infant Formula + Term Human Milk

Note: Human Milk Fortifier is the only product intended to fortify breast milk.

- The following instructions are provided as a courtesy. They are based on calculated results of mixing – not clinically or analytically tested.
- Powdered infant formulas are not commercially sterile and should not be used for preterm or immunocompromised patients unless under strict medical supervision as a clinical necessity. Follow all guidelines for preparation and use. Expressed human milk is not sterile; therefore, feed fortified breast milk immediately or store refrigerated for no more than 24 hours.
- Weighing powder provides the most accurate final dilution. Approximate household measurements (level, unpacked) are provided as a convenience when precise dilutions are not required.

Instructions – Add powder to human milk, and agitate to mix.
